**<http://www.fibaro.com/en/support>**

## Functional features

Reed sensor

Temperature sensor  
(extra option)

Binary input

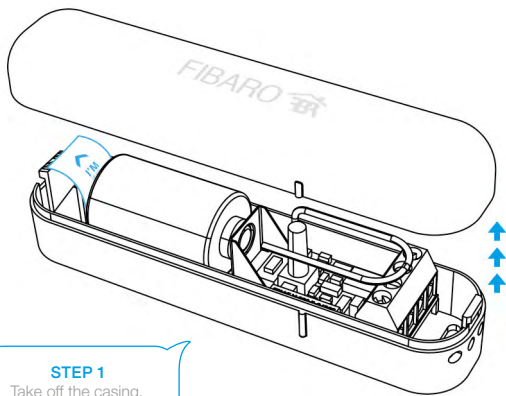

Scenes switch

# Download FIBARO app for smartphone

## Start the device

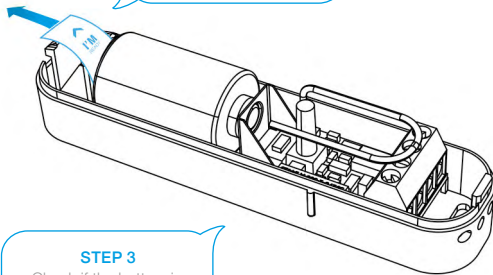

### STEP 1

Take off the casing.

## Start the device

### STEP 2

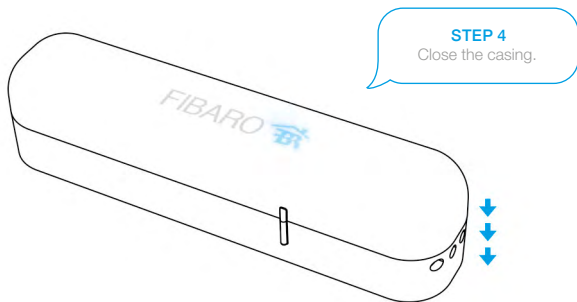

Remove the battery blocker  
"I'm ready".

### STEP 3

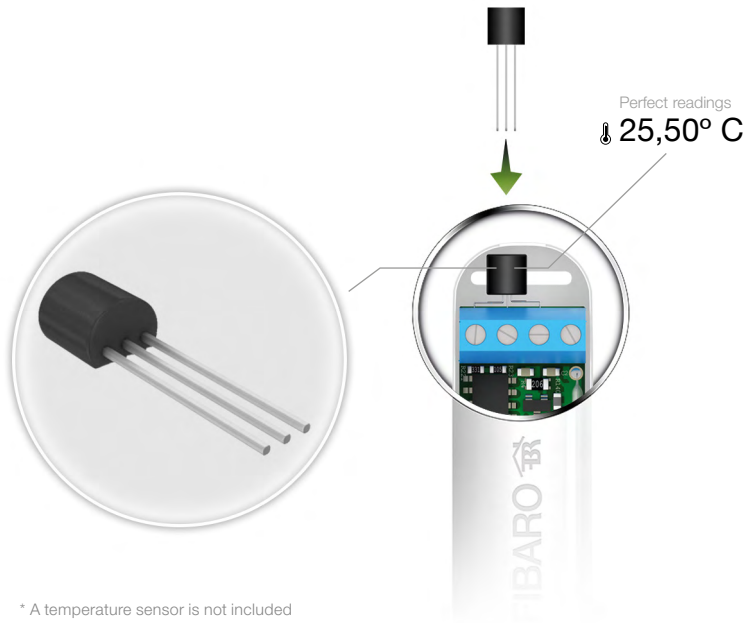

Check if the battery is  
placed correctly.

## Start the device

## Temperature measurement

You can get some extra functions by adding a temperature sensor\*, however it should be installed before inclusion.

\* A temperature sensor is not included in the Door / Window Sensor set.

## Your Door / Window Sensor is ready to be added to the Home Center.

Door / Window Sensor must be in range of the Home Center because it requires a direct communication with the controller.

## Start inclusion mode

### STEP 5

Start your FIBARO application.  
Go to Settings.

## Start inclusion mode

**STEP 6**

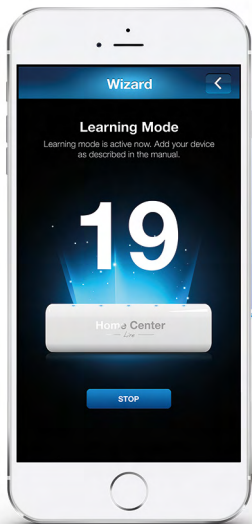

Press "add device".

**STEP 7**

Press "Next".

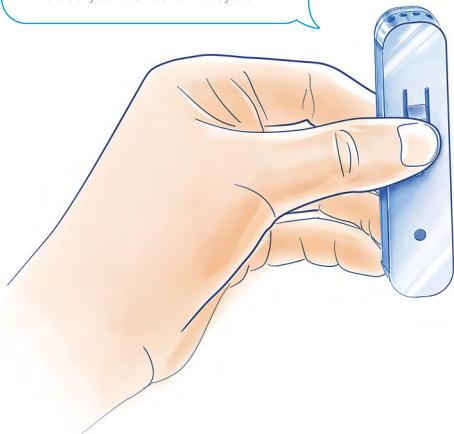

## Inclusion mode has been launched

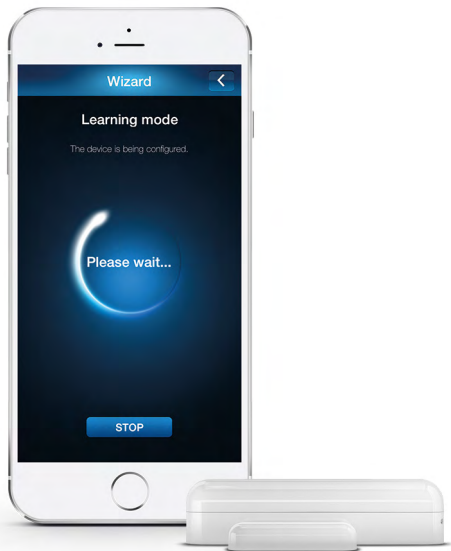

## Add your device

### STEP 8

Quickly, triple click the button in order to add your device to the system.

## Processing your configurations

## Wake up the device

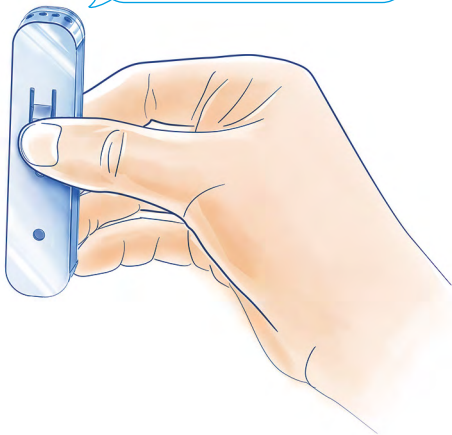

Sometimes waking up the device is not required so it will be omitted automatically.

### STEP 9

Quickly, triple click the button in order to wake up the device.

## The device has been added

### STEP 10

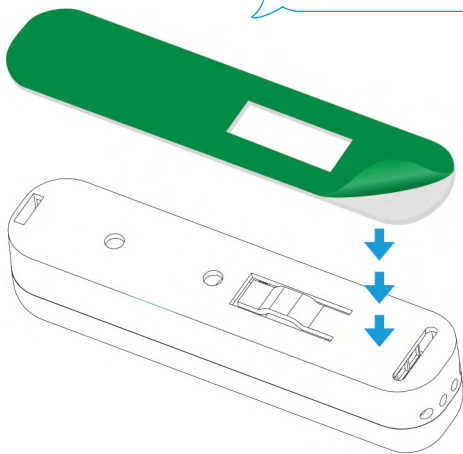

Name the device and assign it to the room.

## Installation

### STEP 11

Put a double-sided tape on the device and magnet.

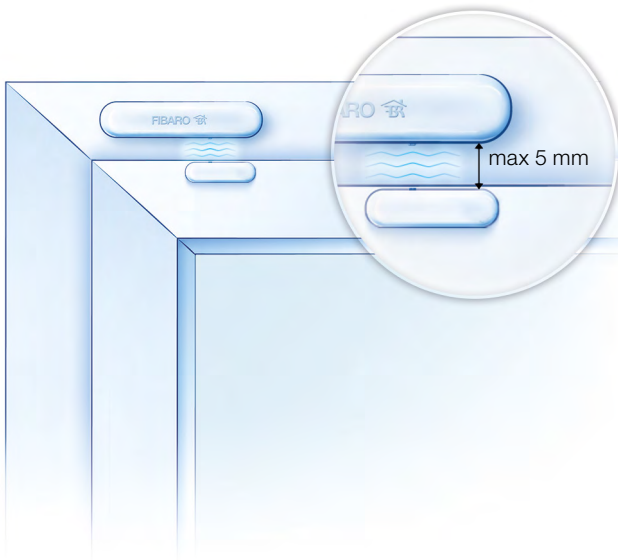

## Installation

During the installation it is recommended to wake up the device.

Make sure the sensor is in range of the Home Center because it requires a direct communication with the controller.

## Customized colours

Door / Window Sensor is available in seven colours  
to match any interior design.
